

Leeds Teaching Hospitals NHS Trust
Congenital Echo Department

Highly Specialist Cardiac Sonographer (Advanced Practitioner)
Ref: 298-WOM942

Congenital heart disease services in Leeds serve a population of approximately 5.25 million covering the whole of Yorkshire, Humberside and Northern Trent. Around 500 children are born with heart defects in this region every year (approximately 10% of the total for the UK). This highly complex and specialist service deals with a wide spectrum of patients including the fetus, neonate, child, adolescent and adult.

The cardiac ultrasound service for patients with congenital heart disease is a relatively new service and provides the opportunity to work with a small team of specialised cardiac sonographers to develop and expand this service across the region. All types of echo studies are performed ranging from fetal and 3D work to stress and contrast studies.
