

Senior Cardiac Physiologist or Clinical Scientist LONDON

“Intensive care technology Ltd (ICT) was established in 1980 to provide technologists to work during cardiac surgery in private hospitals in London. We are a small group of professionals who work autonomously within the operating team. The work is varied with many innovative procedures carried out. You will be a key member of the team in a very supportive environment. Full training will be given in the areas you are unfamiliar with, (the job is so unusual we expect this to be the case).

Duties include: setting up invasive and non invasive monitoring equipment, cardiac output, trans oesophageal echo, intra aortic balloon pump, interoperative pacing, point of care testing, blood gases and electrolyte analysis, thromboelastography and platelet mapping, (that's the bit we teach most) and most importantly being cheerful and friendly.

Ideally you will have a relevant professional qualification and a degree in cardiac physiology or similar and have had a few years in cardiac cath and/or operating theatres.

The work is definitely not 9 to 5, but you get plenty of free time. Job-share possible. You should expect to gross more than £65k.

Dominic Cox, Managing Director, Intensive Care Technology Ltd. dominic.cox@gmail.com 07971 597395”
